Collection Date: 26 Mar 2026

Thyroid Function

Your thyroid hormones are within the normal range, albeit your FT3 levels are at the higher end of normal. As such you may want to consider monitoring your thyroid function, and following up with your GP if you start to experience any symptoms of an overactive thyroid such as unexpected weight loss, rapid or irregular heartbeat, sweating and irritability.

TSH 2.6 mIU/L

Communicates with the thyroid gland to produce T3 and T4 which regulate metabolic functions. High TSH thyroid test levels indicates an underactive thyroid, and low levels an overactive thyroid.

[results history](#)

FT4 17.3 pmol/L

Measures the thyroxine that is freely circulating and able to regulate metabolism. High FT4 thyroid test levels indicate an overactive thyroid, and low levels an underactive thyroid.

[results history](#)

FT3 6.0 pmol/L

Measures the triiodothyronine that is freely circulating. High FT3 thyroid test levels indicate an overactive thyroid, and low levels an underactive thyroid.
